

Assignment 7

Scrum Artifacts

They provide Key information that the investors and scrum team need to have and understand so that they can understand the activities needed to be done and the activities done. Examples of Scrum artifacts would be Sprint or Product Backlog. Scrum Artifacts are extremely important as they give insight on the backlogs of what as already been done and the key information that the entire scrum team needs.

Scrum Roles

Scrum roles are the roles within our scrum team and our broken down into three categories

Product Owner, Scrum Master and the Development Team

The product owner focuses on marketability and return on investment and does not have a huge part in aiding the dev team or scrum master they focus a lot on external factors. The Scrum Master They ensure that the architecture is good for the system and good for the team and for the market. They ensure that the team knows what the goals are for the project and will facilitate any big events as needed. The Dev team focuses on building on releasing builds of the scrum there job would basically be considered the how and make sure that is usable and reasonable.
